//About This Script: This is the main script that will run the assigned test. In this script there are references to outside functions which are also included in the GitHub project folder. The purpose of this test is to login to a list of user's cable boxes and search for specific movie titles, artwork, metadata etc. for each of the assigned titles and return data for processing and reporting. This is fully automated and can be scheduled to automatically run at any time eliminating the need for overhead which was the primary purpose of this project.//

params FileSetup, LoginLine

If LoginLine < 9 --This carries over and will end the test if the user list is completed, Change this number for how many users are being tested. There are currently 8 users for Redacted thus the script will end after the last user
